N-PSDB;
The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful
                                                                                                                                                                                                     830

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human polypeptide, SEQ ID NO: 3978.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin rc portion (e.g. AAZZ4802) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZZ4811-2Z2907; amiro acid sequences AAY410308-Y41040) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Alsc, pathological conditions can be diagnosed by determining the amount of the

This invention describes the isolation of a novel human secreted protein, zsig46 encoded by a gene on chromosome 13 which is mainly expressed in the thyroid. This product can be used to study secretion of proteins from cells and also to treat or prevent deficient expression of zsig46, which may be associated with thyroid diseases (e.g. hypothyroidism, Graves' disease, thyrotoxicosis, thyroid cancer etc.) or with diseases that involve genes in the same region of chromosome 13 (e.g. Hirschaprung's disease, neuronal ceroid-lipofucinosis, Wilson disease and Reiger syndrome). Antibodies and other binding proteins, are used as immunoassay reagents to detect zsig46 or cells expressing it, e.g. for assessing thyroid function to produce anti-idiotypic antibodies, for affinity purification of zsig46, to screen expression libraries, to neutralise zsig46 activity, and to deliver toxins, radioisotopes etc. for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Secreted protein; zsig46; human; chromosome 13; thyroid; hypothyroidism; Graves disease; thyrotoxicoxis; thyroid Hirschsprung's disease; neuronal ceroid-lipofucinosis; W Reiger syndrome; immunoassay; detection; anti-idiotypic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New secreted polypeptide, zsig46, and its fragments, related fusion proteins - used for diagnosis and treatment of thyroid disorders or

The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO

Sequences AAU29380-AAU29509 represent human G protein-coupled receptor (GPCR) polypeptides of the invention. The proteins and the DNA sequences encoding them can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             manic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ۲.
```

The invention describes an isolated

nucleic

acid

comprising

```
HESULT 6

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; novel protein; Antianaemic; osteopathic; antiinflammatory; immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosie; tissue regeneration; immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anorexia, cardiomyopathies), porliferative diseases and cancers (e.g., psoriasis, lung cancer), hormonal disorders, sexual dysfunction and hereditary mental disorders in a human patient. A host cell comprising (I) is used to screen for a modulator of nGPCR-x activity, nGPCR-x is used to identify compounds that can treat mental disorders. The polypeptide encoded by (I) is used to purify a G protein from a sample. This is the amino acid sequence of a novel G protein coupled receptor (nGPCR-x) protein described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              thyreotoxicosis, myxoedema), renal failure, inflammatory conditions (e.g. Crohn's disease), diseases related to cell differentiation and homeostasis, rhematoid arthritis, autoimmune disorders, movement disorders, CNS disorders, viral infections (e.g. Human immunodeficiency virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity,                                        Example 4; Page 543-544; 894pp; English

(I) is used to screen for an nGPCR-x related disorder including thyroid disorders (e.g. thyreotoxicosis. myxoedema), renal failure, inflammatory conditions (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence encoding a portion of a G protein coupled receptor (nGPCR-x).

(I) is used to produce a recombinant nGPRC-x polypeptide. A polypeptide encoded by (I) is used to induce an immune response in a mammal. nGPRC-y is used to identify a compound that binds to it and/or modulates it's activity. (I) is used to identify animal homologues of nGPCR-x. (I) can be used to diagnose a human subject as having a brain or genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 192 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies craised against the polypeptides are used in a method of treatment of a CC mammal and prevention of disorders caused by the aberrant protein CC expression or activity. The polypeptides can be used as molecular weight expression or activity. The polypeptides can be used as molecular weight care used to identify compounds which bind to the polypeptides. CC Polynucleotides of the invention are used as probes and primers, for crecombinate proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a cumour, in assays to determine biological activity, to raise cantibodies/elicit an immune response, to determine quantitative protein clevels, as tissue markers, and to isolate receptors or ligands. CC Polypeptides of the invention may also be useful in treating platelet cd isorders, stem cell disorders, regenerating bone, cartilage, tendon, cligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, cc allamer's, Parkinson's and Mintington's diseases, amylotrophic lateral contends of the invention or from autoimmunity, cancer, allergy, asthma, graft-currous system disorders, and infection. The present sequence cc represents a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                             The invention relates to avilamycin derivatives (I) with antibacterial, virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This is the amino acid sequence of a lung specific nucleic acid
                                                                                                                                                                                                                                                                  New avilamycin derivatives, useful for treatment of infections, nucleic acid encoding avilamycin synthesis enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               **vilamycin; antibacterial; virucide; protozoacide; fungicide; infection; medicine; Staphylococcus aureus; biosynthetic gene cluster; enzyme.

                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and prevent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from Mycobacterium tuberculosis and Mycobacterium leprae identified using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent biased activity of the assay system. The method is useful for identifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         smooth muscle disorder; lactic acidosis; neurological disorder; parkinson's disease; cardiac disorder; congentive heart failure; myocardial infarction; pulmonary disorder; emphysema; bronchitis; parasitic infection; amoebiasis; filariasis; cancer; leukaemia; cell proliferative disorder; Incyte 2900469CD1; enzyme.

Claim 1; Page 149-150; 170pp; English.

The invention relates to a new isolated human enzyme (NZMS) (I) and the encoding nucleic acid (II). The polypeptides and polynucleotides are useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of NZMS. The NZMS or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The antibody is useful in diagnosing a condition or disease associated with the decreased expression or NZMS and in detecting (I). (I) is useful in the production of antibodies. The microarray is useful in monitoring or measuring gene expression profiles. The polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions a simunate system disorders (e.g. acquired immune deficiency syndrome (AIDS), contact dermatitis), immune deficiencies (e.g. common variable immunodeficiency, Chediak-Higashi syndrome), developmental disorders (e.g. Custing's syndrome, hypothyroidism), eye disorders (e.g. glaucoma, cataract), metabolic disorders (e.g. cystic fibrosis, sickle-cell anaemia), smooth muscle disorders (e.g. cystic fibrosis, sickle-cell encurological disorders (e.g. parkinson's disease, epilepsy), cardiac disorders (e.g. parkinson's disease, epilepsy), cardiac disorders (e.g. parkinson's disease, epilepsy), cardiac (amobiasis, filariasis), and cell proliferative disorders (e.g. cancer, protein interactions, drug-target interactions, and gene expression of 11 novel human enzymes (NZMS1-11) of the invention

Sequence 16506, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER: OF SEQ ID NOS: 33142

SEQ ID NO 16906
LENGTH: 263
TYPE: PRT

                                                                                                                                                                                                                                                                                                                                                                                                 -!- FUNCTION: Sequence-specific transcription factor which is part a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the Abd-B homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-0CT-1996 (Rel. 34, Created)
